Application – Applied AI Engineer, Enterprise (Munich)

Dear Anthropic Hiring Team,

I am applying for the Applied AI Engineer, Enterprise role in Munich. For the past three years I have been doing a version of this job inside a payments company: taking LLMs from prototype to production in an environment where reliability, security and compliance are not optional.

At Intouch Group, I design and ship LLM-powered chatbots and agents that automate customer-facing and internal workflows, and I integrate them into Spring Boot microservices running on Google Cloud. Because the platform handles financial transactions, I also own the parts enterprise customers care about most: Keycloak-based authentication (OAuth2, JWT, RBAC), Apigee API governance, mTLS, IAM and observability. I have reduced API latency by up to 45% and cut deployment cycles by 70%, and I provide level 2/3 production support under strict SLAs.

What I would bring to your enterprise customers:

- Hands-on experience integrating LLMs into existing backend systems, not greenfield demos.
- The security and platform background to talk credibly with enterprise architects and security teams.
- A Master's degree in intelligent systems and practical ML experience (scoring, fraud detection, NLP).
- French, English and Russian, useful for customers across Europe.

On the practical side: I am a non-EU national with a Master's degree and 5+ years of senior experience, which makes me eligible for the EU Blue Card. I am currently in Europe and available for an on-site interview in Munich at short notice.

I would be glad to show how I approach turning a customer's messy workflow into a reliable Claude-based solution.

Kind regards,

Mamadou Moustapha Sylla
