Application – LLM Engineer (Munich)

Dear Spherecast Team,

Your LLM Engineer posting asks for a track record of building LLM-powered automations or agents that are core to a production system. That is exactly what I do today.

At Intouch Group, a payments company, I design and build LLM-powered chatbots and agents that automate customer-facing and internal workflows, and I run them as production microservices on Google Cloud (Cloud Run, GKE, Pub/Sub, BigQuery). I also bring the backend depth that agents need to be trustworthy: Java/Spring Boot and Python services, clean REST APIs, Terraform-managed infrastructure, CI/CD, monitoring and on-call production support.

Beyond LLMs, I have built predictive ML models (scoring, fraud detection) and NLP pipelines, and I hold a Master's degree focused on AI and intelligent systems. Supply-chain data is messy and high-stakes, much like financial data, and I am used to designing systems that stay correct when inputs are not.

On the practical side: I am a non-EU national with a Master's degree and 5+ years of senior experience, which makes me eligible for the EU Blue Card. I am currently in Europe and available for an on-site interview in Munich at short notice.

I would love to discuss how I could help build and scale your supply-chain agent.

Kind regards,

Mamadou Moustapha Sylla
