Application – Senior Java Backend Engineer (Munich)

Dear Atolls Hiring Team,

I am applying for the Senior Java Backend Engineer position in Munich. I build and operate high-traffic Java/Spring Boot backends for a payments platform, where performance and reliability directly affect revenue.

Highlights relevant to your role:

- 5+ years of backend development, mostly Java and Spring Boot, plus earlier full-stack work since 2018.
- Reduced API latency by up to 45% through query optimization and performance tuning; ran load and stress tests to validate scalability.
- Migrated legacy JEE monoliths to Spring Boot microservices.
- Containerized services on Kubernetes (GKE) and Cloud Run, Terraform, CI/CD that cut deployment cycles by 70%.
- API design with OpenAPI, security with Keycloak (OAuth2/JWT), Apigee and mTLS.

I am also comfortable with event-driven and asynchronous designs (Pub/Sub), and I would enjoy working with Spring WebFlux at your scale. I bring an AI/ML background as a bonus, useful for personalization and recommendation features.

On the practical side: I am a non-EU national with a Master's degree and 5+ years of senior experience, which makes me eligible for the EU Blue Card. I am currently in Europe and available for an on-site interview in Munich at short notice.

I look forward to discussing how I can contribute to your engineering team.

Kind regards,

Mamadou Moustapha Sylla
