Application – Senior Backend Engineer – Fidectus (Munich)

Dear enmacc / Fidectus Team,

I am applying for the Senior Backend Engineer role on Fidectus. I have spent the last years building and supporting backend systems for financial transaction processing, where correctness, auditability and uptime are critical, which seems close to the world of trade confirmation and settlement.

What I bring:

- Java / Spring Boot microservices and REST APIs designed with OpenAPI for internal and partner consumers.
- Level 2/3 production support on critical financial platforms under strict SLAs.
- Performance work: up to 45% lower API latency, optimized batch processing for higher throughput.
- Security and integration: Keycloak (OAuth2, JWT, RBAC), Apigee, mTLS; experience with PostgreSQL, Oracle and MongoDB.
- Cloud and DevOps: Docker, Kubernetes, Terraform, CI/CD (GCP, transferable to AWS).

On the practical side: I am a non-EU national with a Master's degree and 5+ years of senior experience, which makes me eligible for the EU Blue Card. I am currently in Europe and available for an on-site interview in Munich at short notice.

I would be happy to discuss how my financial-systems experience can help Fidectus.

Kind regards,

Mamadou Moustapha Sylla
