Application – Platform & DevOps Engineer (Munich)

Dear Yoummday Team,

I am applying for the Platform & DevOps Engineer role. I architect and operate cloud infrastructure for a payments platform end to end, from Terraform code to production on-call.

Relevant experience:

- Infrastructure as code with Terraform: reproducible, versioned and auditable environments.
- Kubernetes (GKE) and serverless containers (Cloud Run) with Docker; CI/CD pipelines that cut deployment cycles by 70%.
- Observability: centralized logging, monitoring and alerting.
- Security: IAM, secret management, TLS/mTLS, Keycloak and API gateways (Apigee).
- Reliability and cost: capacity planning, autoscaling, right-sizing.

My main cloud is GCP, but the skills you list (Terraform, Kubernetes, CI/CD, observability) are the same on Azure, and I ramp up quickly on new providers. I also have a strong backend background (Java/Spring Boot, Python), which helps me work closely with product teams.

On the practical side: I am a non-EU national with a Master's degree and 5+ years of senior experience, which makes me eligible for the EU Blue Card. I am currently in Europe and available for an on-site interview in Munich at short notice.

I look forward to hearing from you.

Kind regards,

Mamadou Moustapha Sylla
